

# **Bharat Systems Helped Residents Catch Thieves, Burglars, and Miscreants**

# REQUIREMENTS

- Customers required high end CCTV cameras with features like number plate recognition, etc.
- This way, the cameras could immediately capture images of number plates, and send them to the customer's mobile phones.

# CLIENT CHALLENGE

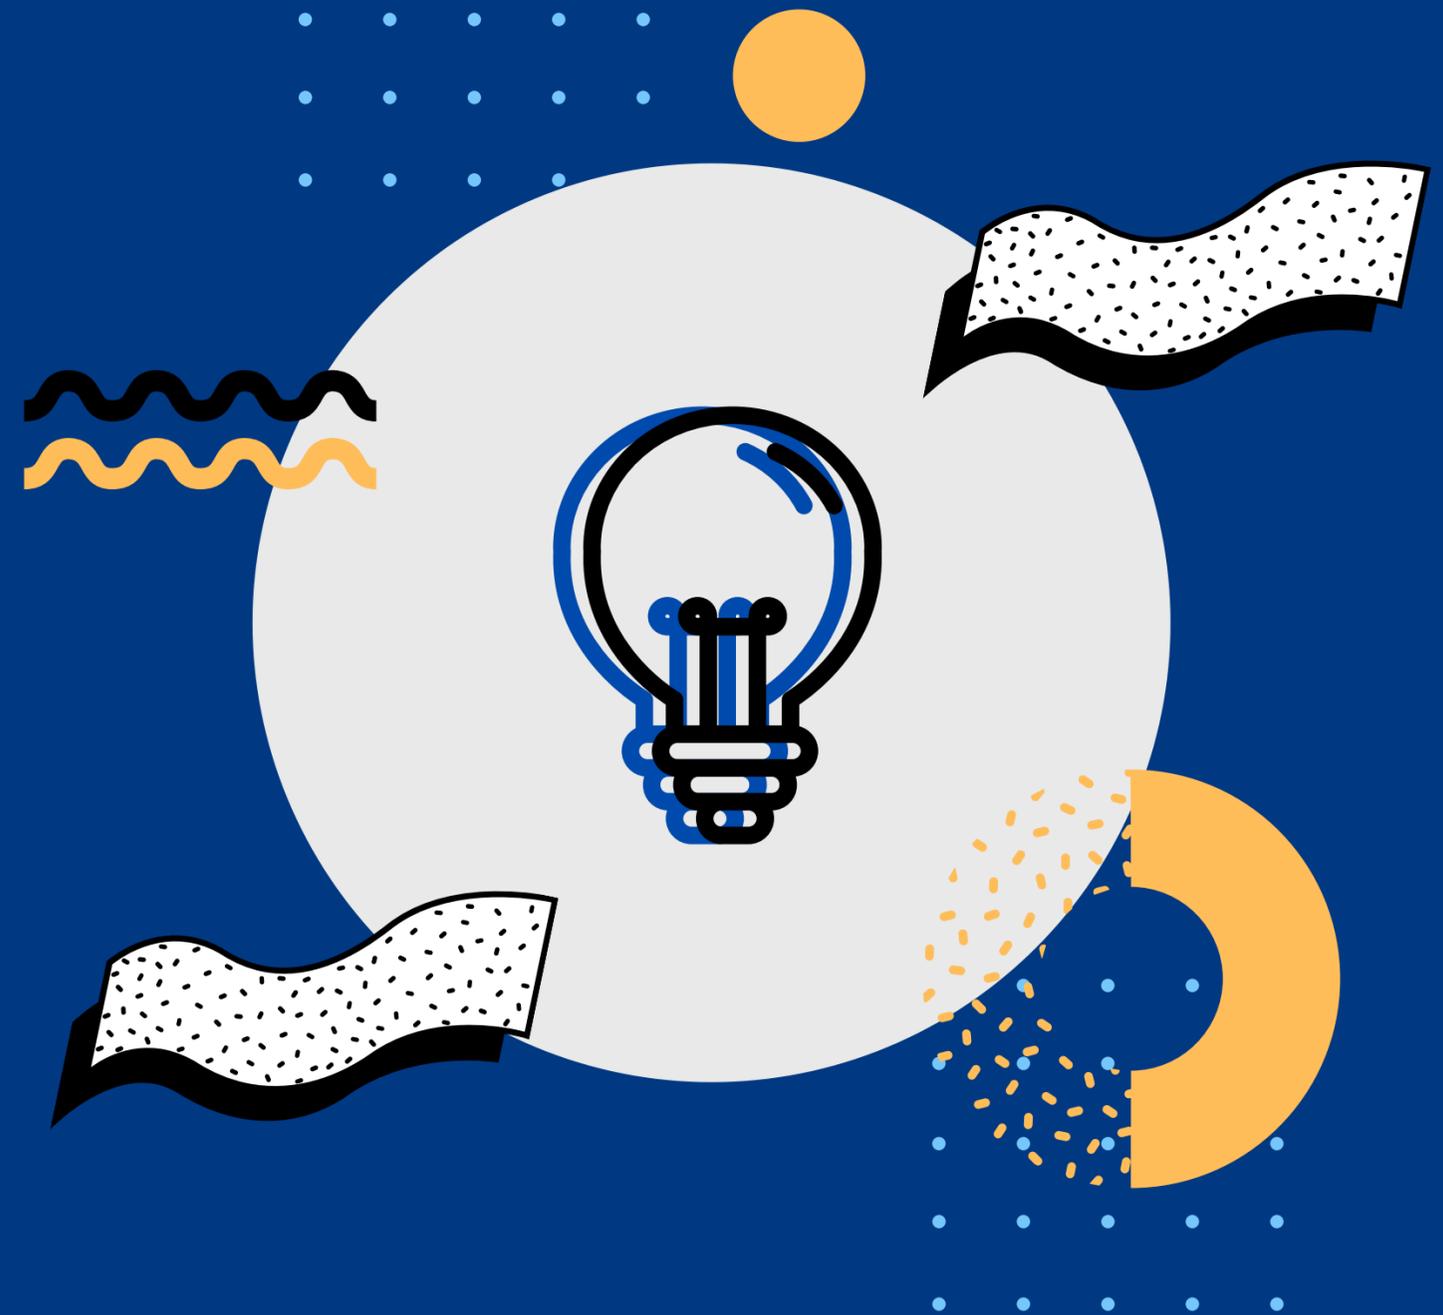

- Miscreants and burglars troubled numerous residents by creating unnecessary nuisance. Stealing, property damage, eve-teasing, burglary were among those troubles caused.
- However, most often, these miscreants escaped before the residents could take any action.
- As a result, the residents faced challenges in identifying, or locating the miscreants.

# APPROACH

An assessment was done to understand the requirement, with respect to camera resolution, range of the camera coverage, and capturing-recording data (number plate images) in the customer's device.

The selected range of CCTV cameras were of high-resolution with 100 mts range. It had basic AI capabilities to capture number plate images and record them directly in DVR (Digital video recorder), on the customer's mobile phone.

# RESULTS

- After deploying the CCTV cameras, the residents were able to successfully capture miscreants, and hand them over to the police.
- With highly efficient CCTV cameras in place, public nuisance was drastically reduced in the neighborhood.
