

Bharat Systems Developed Media & Communication Facility for ISRO

Requirement

ISRO required an optic link that could connect two of their centers, located two kilometers apart from each other.

Client Challenge

The main challenge posed by the client was to make all audio and visual content available at both the centers, with minimum or no transmission loss.

Results

To tackle the challenge, we set up optic fiber link that had very low transmission loss.

The client was fully satisfied with the solution.
